Current Status of Bariatric Surgery in Taiwan

Kong-Han Ser M.D.¹, Wei-Jei Lee M.D, PhD², Ming-Tsan Lin M.D, PhD³

¹ *Department of Surgery, Ten Chan General Hospital, Zhongli, Taoyuan, Taiwan*

Director, Taiwan Society of Metabolic and Bariatric Surgery.

² *Professor, China Medical University Hospital, HsinChu, Taiwan*

³ *Department of Surgery, National Taiwan University Hospital, Taipei, Taiwan*

Objective:

Taiwan is one of the first regions in Asia to implement bariatric surgery. After years of development, great progress has been made in surgical techniques, quantity and quality.

Methods:

We have collected statistics on the types, quantity and quality of bariatric surgery in Taiwan in the past ten years to analyze the current development status of bariatric metabolic surgery in Taiwan.

Results:

From the earliest conventional open Gastric Partition surgery, to the era of minimal invasive, followed with Laparoscopic Gastric Partition surgery, later with Laparoscopic Gastric Bypass surgery, Laparoscopic Adjustable Gastric Banding surgery, Laparoscopic Sleeve Gastrectomy surgery, to the Sleeve plus surgery launched in recent years, Taiwan's bariatric metabolic surgery has always been at the forefront of the world, laying a solid foundation for obesity treatment in Taiwan.

Conclusion:

Metabolic Bariatric Surgery was the only effective treatment for Morbid Obesity, growing and advancing rapidly of metabolic bariatric surgery observed in Taiwan.
